

Lessons using Green Screen

I have presented the use of a green screen for special effects for the students in just about any area of education. I provide students and educators with an exciting and realistic addition to the classroom for all subjects. I have the necessary equipment and software to allow this to happen. I have performed using this pedagogy for years allowing students to work together in groups or provided a background for teachers and students to make their own individual presentations. This concept maybe used for all occasions and all grades and subjects. This is an exceptional addition for students to design a DVD for their senior project or to simply perform a stunning presentation with them in it. On another note it may also be a fantastic supplement to a yearbook.

EXAMPLE LESSONS:

1. ***Language Arts:*** Student's may create a poem or a detail presentation on famous persons for their classes. Visual reports on any and all projects including but not limited to book report.
2. ***Foreign Language:*** Student's may make a presentation on a country with them in the video explaining the different country living.
3. ***Science:*** Student's may demonstrate the orbit of planets using a video or explain the string theory with video background with them in it.
4. ***Math:*** Student's may create a math problem pointing out how and why everything is in mathematically set up with them in the middle of the video.
5. ***Social Studies:*** Student's may give a speech or present a background form of information from a movie and explain what and why this happened.
