

LESSION (D) COORDINATES SHAPE & LINES

Name _____

Directions: Click on the video button to provide directions and answers. You will discover that this lesson although not difficult it is a little more problematic than A-B- or C. It will cover all 4 quadrants and use negative and positive coordinates. If you follow the directions on the video or simply the ones listed below you will not have any difficulty. You only need to place a dot for each coordinate and then connect each coordinate in the order in which you are asked to as we have placed them listed below. We will list the coordinates below in the proper order.

$(-2,6) -- (-2,-2) - (-3,-2) - (-3,-3) -- (0,-3) - (0,-2) - (-1,-2) - (-1,6)$

$(2,6) - (2,5) - (3,5) - (3,7) - (-6,7) - (-6,5) - (-5,5) - (-5,6) - (-2,6)$
