

LESSON 1 GOOGLE SLIDES CHARACTER MATH

You will use google slides to design a cartoon presentation with sayings for each slide. You may create more but you only need 8 slides to start off with. This may be a new method of teaching math to children. I will publish the best lessons on the (teched-resources.org) website. This website receives hits from educators all over the world.

Click on the [animation](#) website and search for what character you would like to create a short story about. You may add voice shapes by clicking on INSERT SHAPES and choose what callouts you would like. You may modify the callout shape by clicking on the yellow dot at the bottom and move it to the person doing the talking.

You may click on a slide and to copy it **COMMAND D** or go to Insert new slide. Your slides may be simple math or use your imagination.
