

# Finding Equivalent Fractions

Lesson 4 Name \_\_\_\_\_

1. Determine which fraction is missing.
2. Place your answer in the space provided. Scan the QR code when completed.

1)  $\frac{1}{3} = \frac{2}{6} = \frac{3}{9} = \frac{4}{12} = \frac{\quad}{\quad} = \frac{6}{18}$

2)  $\frac{1}{8} = \frac{\quad}{\quad} = \frac{3}{24} = \frac{4}{32} = \frac{5}{40} = \frac{6}{48}$

3)  $\frac{5}{8} = \frac{10}{16} = \frac{15}{24} = \frac{20}{32} = \frac{\quad}{\quad} = \frac{30}{48}$

4)  $\frac{3}{5} = \frac{6}{10} = \frac{\quad}{\quad} = \frac{12}{20} = \frac{15}{25} = \frac{18}{30}$

5)  $\frac{1}{2} = \frac{\quad}{\quad} = \frac{3}{6} = \frac{4}{8} = \frac{5}{10} = \frac{6}{12}$

6)  $\frac{7}{8} = \frac{14}{16} = \frac{21}{24} = \frac{\quad}{\quad} = \frac{35}{40} = \frac{42}{48}$

7)  $\frac{3}{7} = \frac{6}{14} = \frac{9}{21} = \frac{12}{28} = \frac{\quad}{\quad} = \frac{18}{42}$

8)  $\frac{6}{9} = \frac{12}{18} = \frac{18}{27} = \frac{24}{36} = \frac{30}{45} = \frac{\quad}{\quad}$

9)  $\frac{2}{4} = \frac{4}{8} = \frac{6}{12} = \frac{\quad}{\quad} = \frac{10}{20} = \frac{12}{24}$

10)  $\frac{5}{10} = \frac{10}{20} = \frac{15}{30} = \frac{20}{40} = \frac{\quad}{\quad} = \frac{30}{60}$

11)  $\frac{2}{8} = \frac{4}{16} = \frac{6}{24} = \frac{8}{32} = \frac{\quad}{\quad} = \frac{12}{48}$

12)  $\frac{4}{5} = \frac{8}{10} = \frac{12}{15} = \frac{16}{20} = \frac{20}{25} = \frac{\quad}{\quad}$
