

Types of Quadrilaterals – Lesson 1

Name _____

Information is presented to you on the left in reference to different quadrilaterals.
Directions: Place the letter under the correct quadrilateral in the space provided.
 Scan in the bar code to check your answers.

NOTE: Squares, Rectangles & Rhombuses are all Parallelograms

Rectangle: is 4 sided shape every angle is right angle (90°) opposite sides are parallel and equal length

Rhombus: 4 sided shape all equal length. Opposite sides are parallel and opposite angles are equal.

Square has equal sides every angle is 90° . Opposite sides are parallel and equal length.

Parallelogram opposite sides are parallel and equal in length. Opposite angles are equal $a=a$ $b=b$

Trapezoid

Isosceles Trapezoid

Isosceles if the sides that aren't parallel are equal in length and both angles come from a parallel side are equal.

1) _____ 2) _____

3) _____ 4) _____

5) _____ 6) _____

- A. Trapezoid
- B. Square
- C. Rectangle
- D. Parallelogram
- E. Rhombus
