

USING A BARCODE IN CLASS

Creating a test or answer sheet using a bar code Generator for your class.

Please email me if you come up with some thoughts for educational lessons on using this concept in class. I am in need of imagination for all grades and subjects.

Creating a bar code

You need Three (3) things:

- 1) A smart phone and or an iPad that can read QR Barcodes.
- 2) A barcode scanner ([Scanlife](#)) - ([Redlaser](#)). Both are free and you may download them from here or from the website ([Working with iPads](#)). I am sure there are more but have not done the research to determine if one is better than the other.
- 3) This website: <http://www.barcodesinc.com/generator/qr/>

To get started it is really quite easy. I normally make a video but not sure if you need one for this!

1. Go to that website listed above.
 - a. Look at the text box below the barcode and type in anything you want. The more you type in the more code in the box!
 - b. Click on Create Bar Code. Take your scanner and pass it over the code.
 - c. You may copy the Bar Code and paste it on your paper for students to use.
