

Lesson 6 Solving One Step Equations

Name _____

Directions: Click on the button above for directions and answers. You only need to solve for each of the letters variables in the problems listed below.

Example: $17x = 153$

Example: $n + 16 = 31$

$$1) \ x + 14 = 76$$

$$2) \ x + 22 = 90$$

$$3) \ x + 25 = 49$$

$$4) \ x + 87 = 99$$

$$5) \ x + 33 = 51$$

$$6) \ x + 70 = 81$$

$$7) \ x + 45 = 69$$

$$8) \ x + 63 = 92$$

$$9) \ x + 15 = 47$$

$$10) \ x + 39 = 80$$

$$11) \ r \times 13 = 13$$

$$12) \ 66 / w = 11$$

$$13) \ 11 \times y = 77$$

$$14) \ w + 18 = 22$$

$$15) \ y / 9 = 8$$
